Conversional Products

**VTTV-Omsk-99**

The airborne VHF transceiver is intended for the installation on board the light airplanes and helicopters of civil aviation for establishing of radio communication between the crews and air traffic controllers of the ground air traffic control services.

The transceiver is produced in two modifications:

- the control is carried out from the front panel;
- the control is carried out from the remote control panel.

The transceiver can operate with low voltage of 18 V.

### Basic specifications

*Elektrosignal ZAO*
